Smart grid technologies for addressing societal challenges

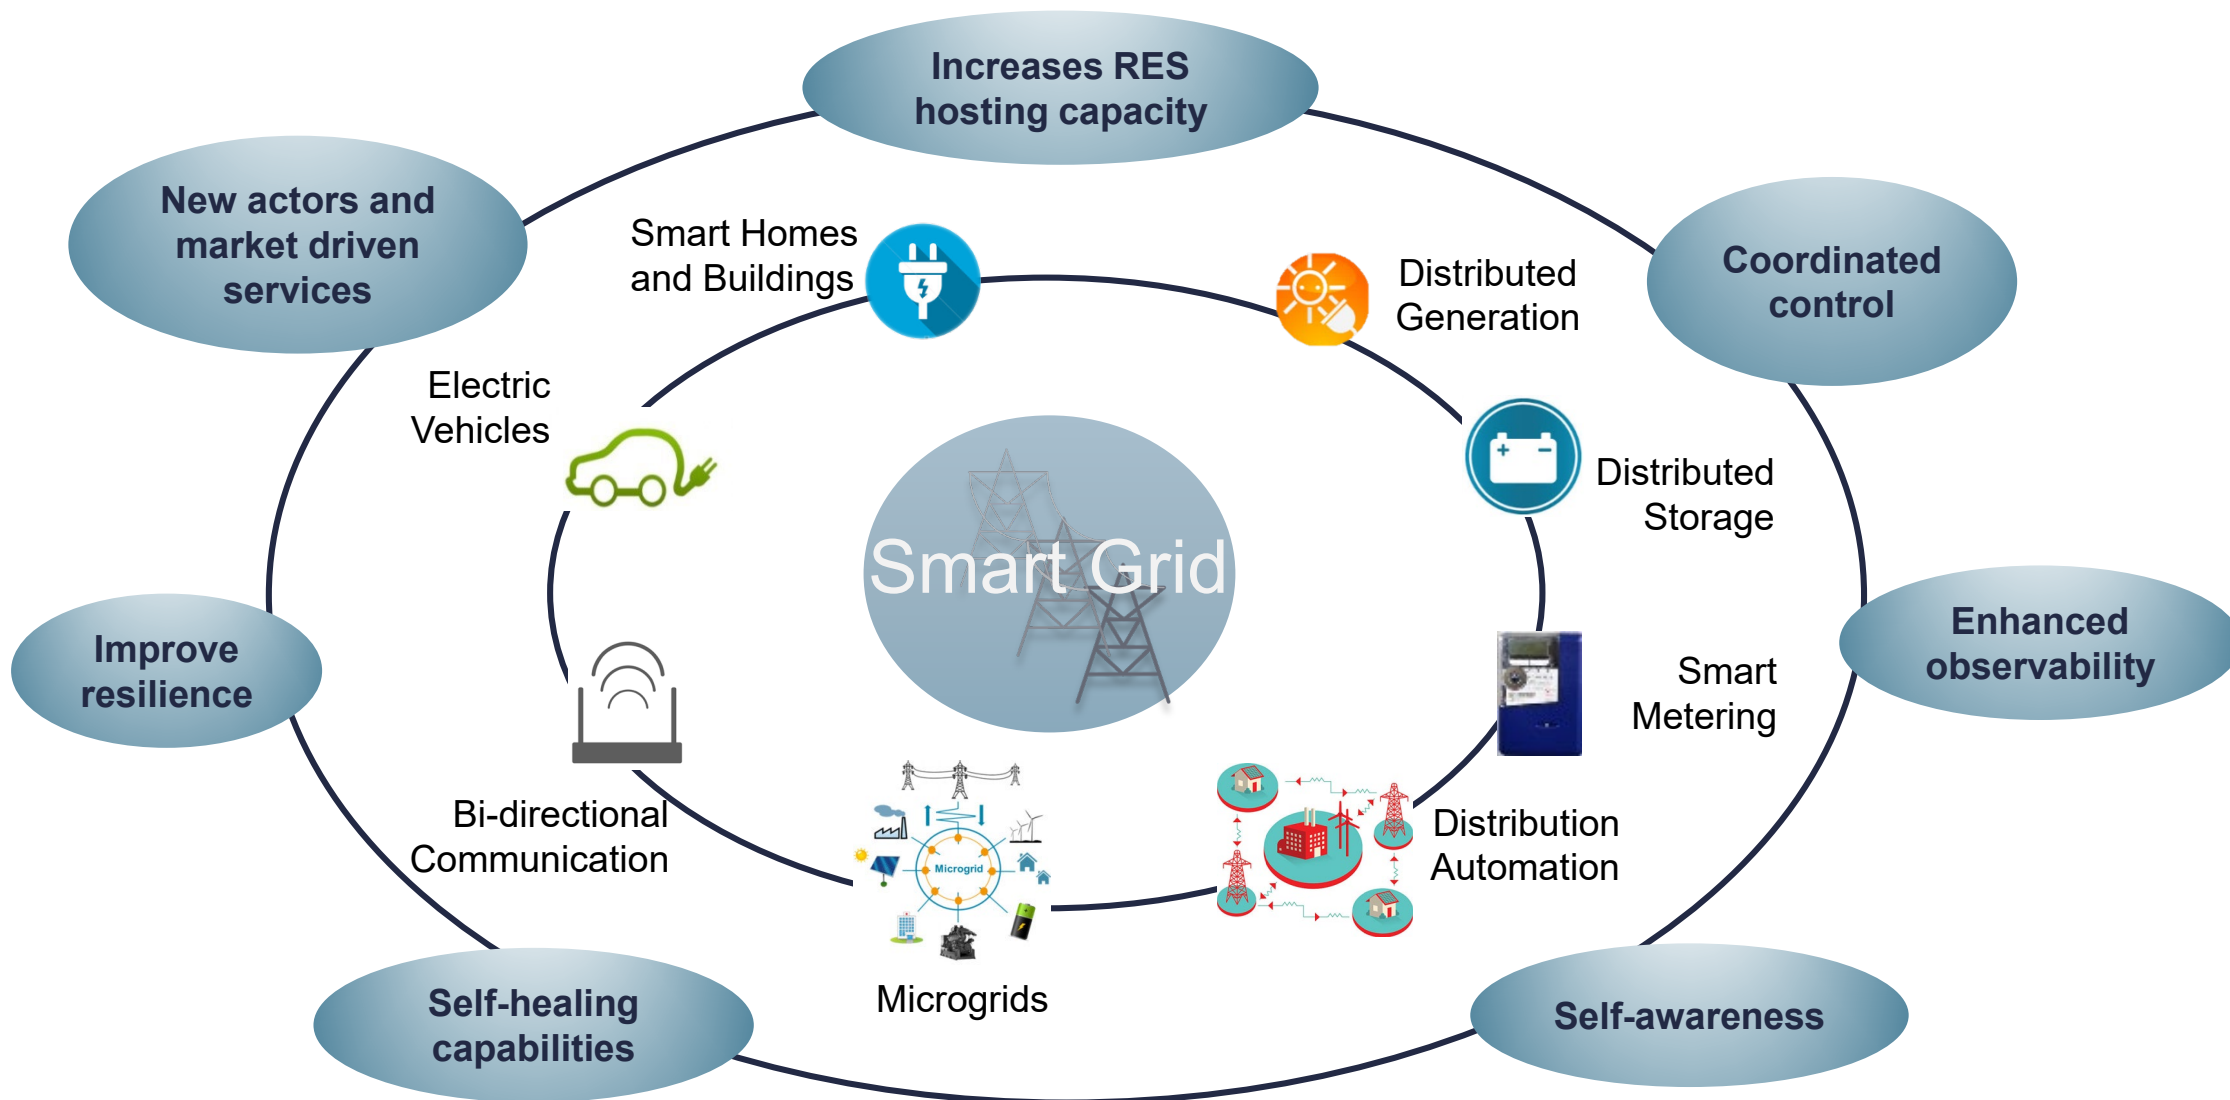

Clara Gouveia, clara.s.gouveia@inesctec.pt

Energy Systems of the Future, FEUP, Porto

29th May 2019

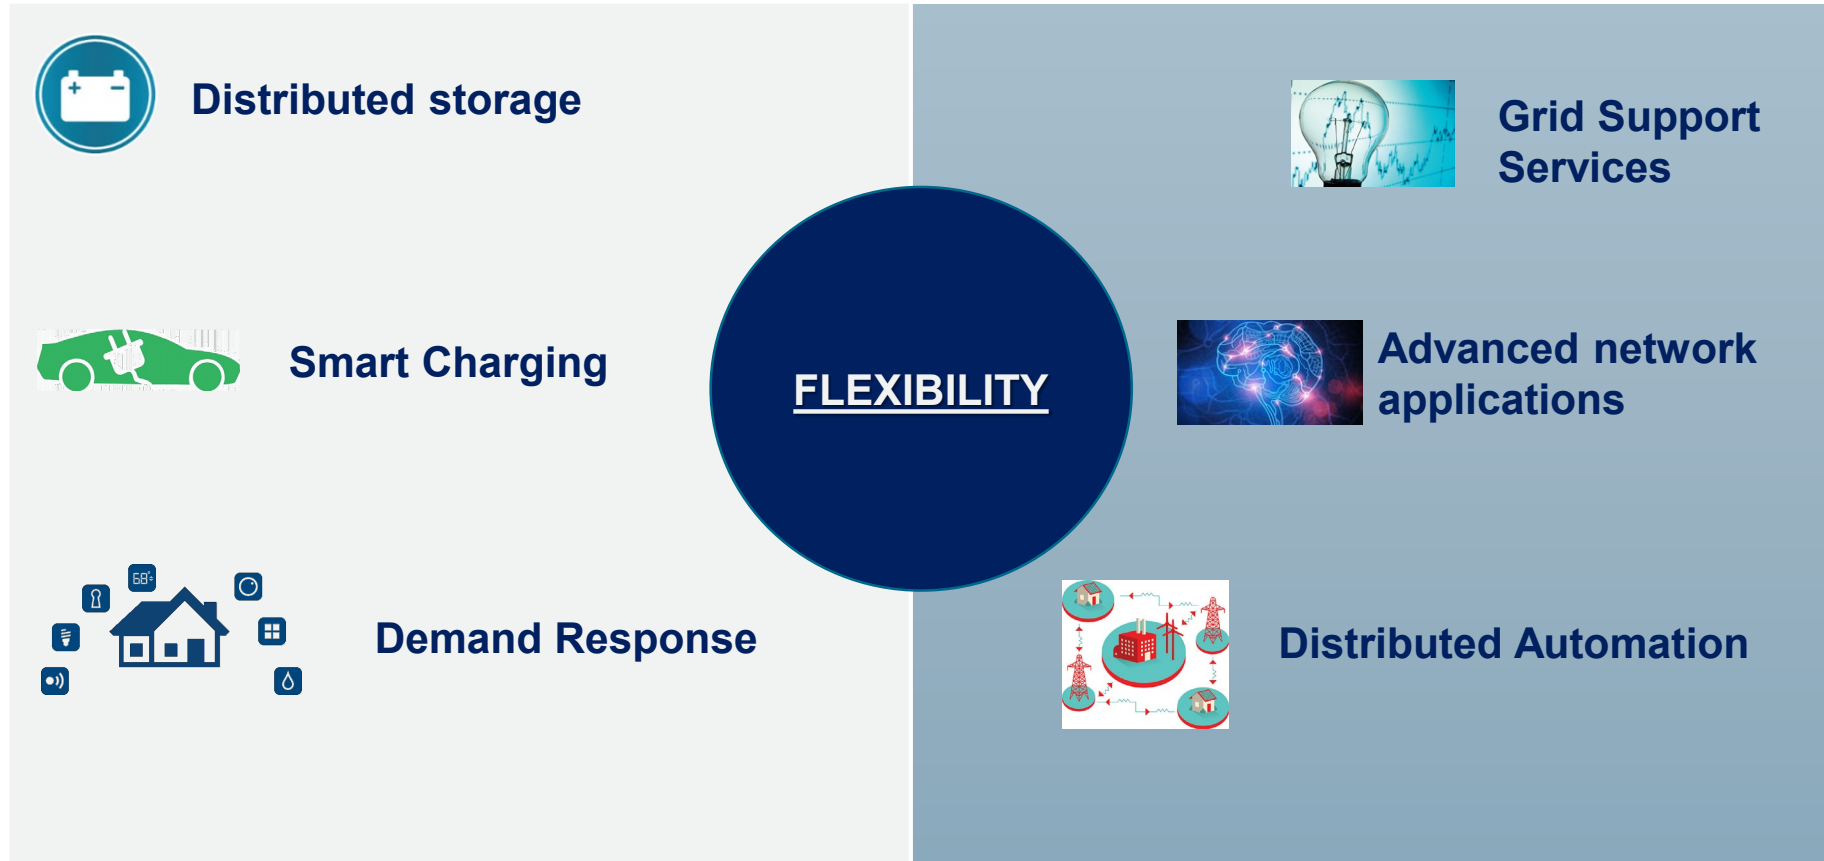

Smart grid technologies: Why do we need it?

Smart and Flexible Distribution Network

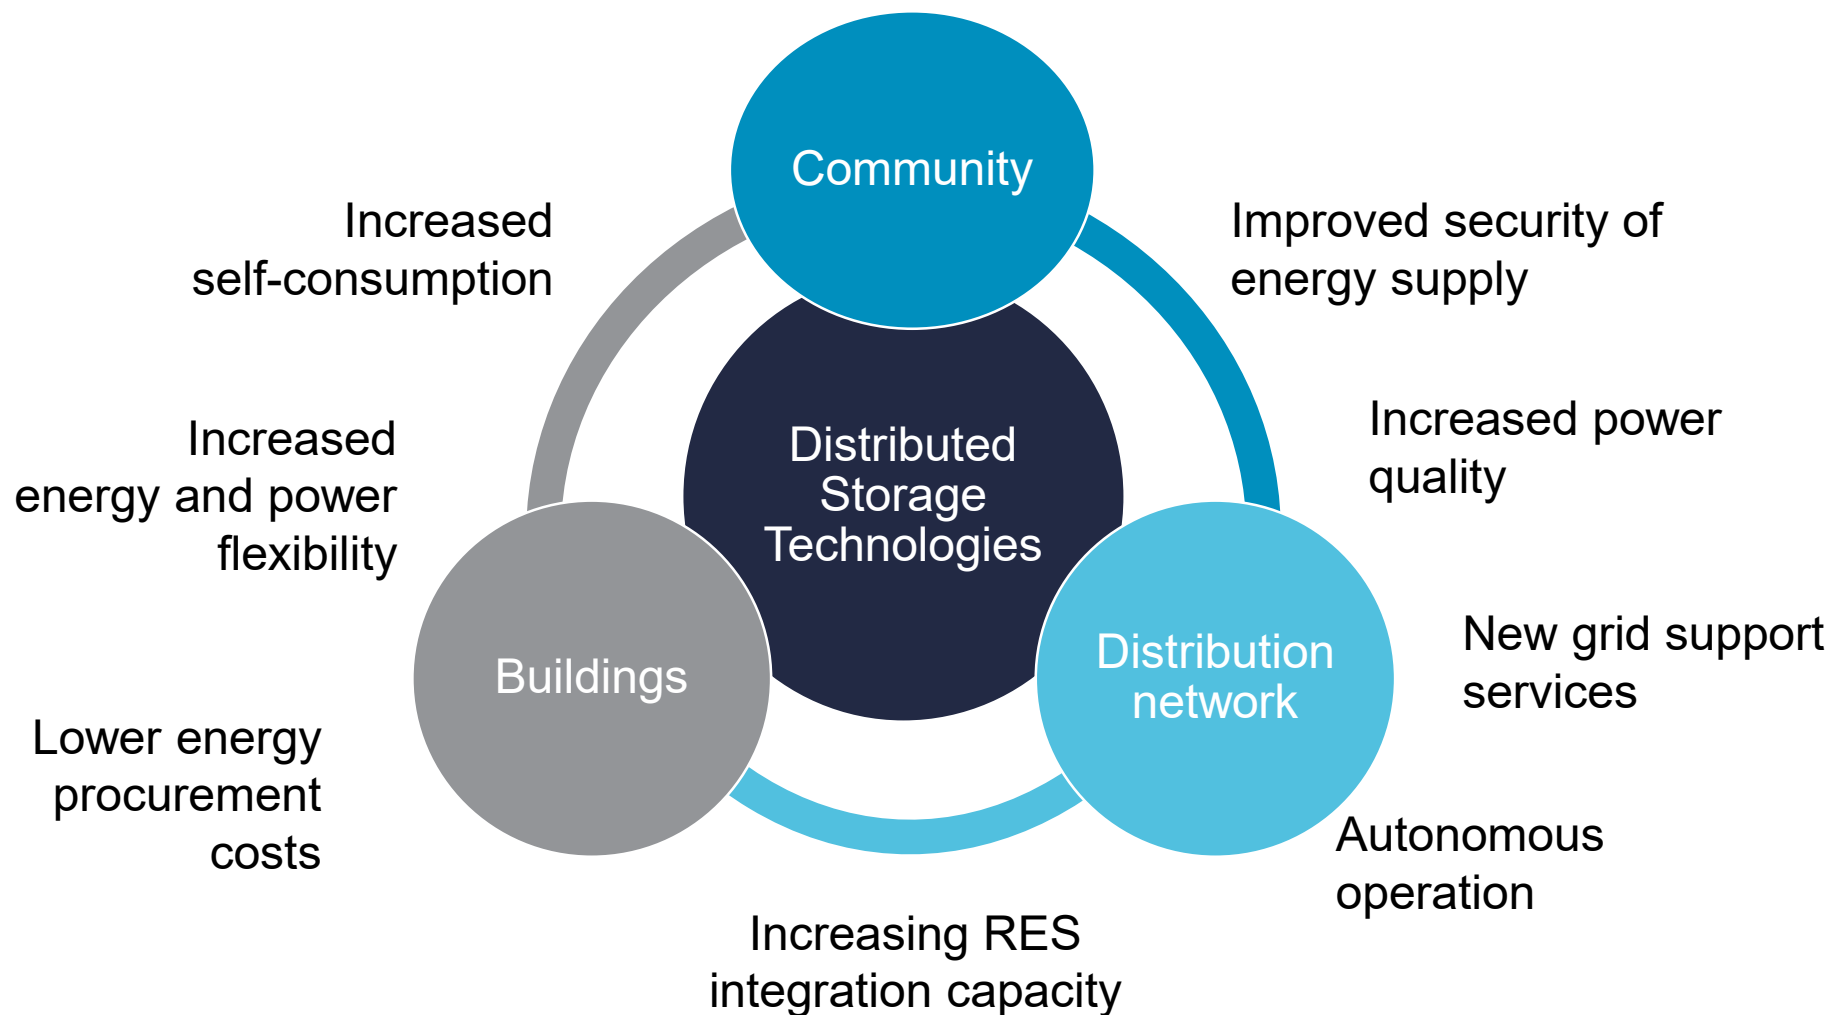

Flexibility is the key for smart distribution grids

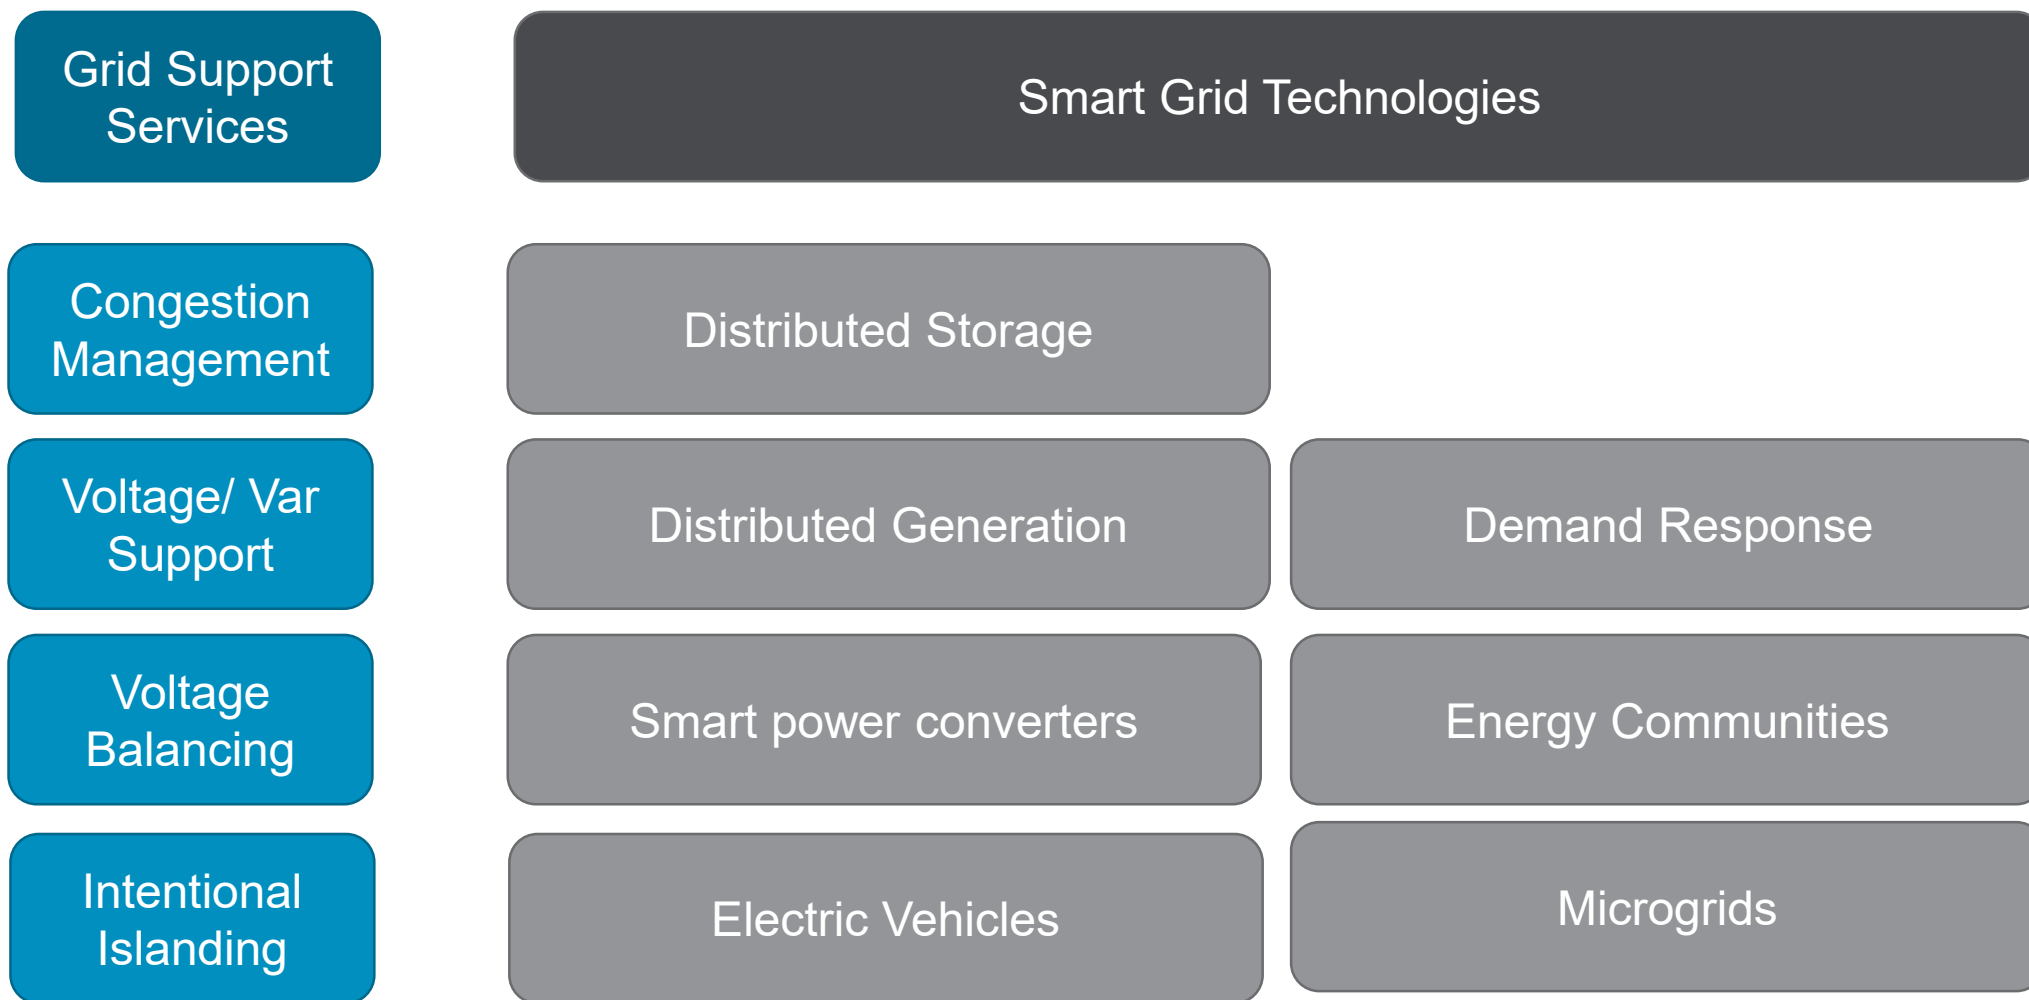

Smart and Flexible Distribution Network: Distributed Storage

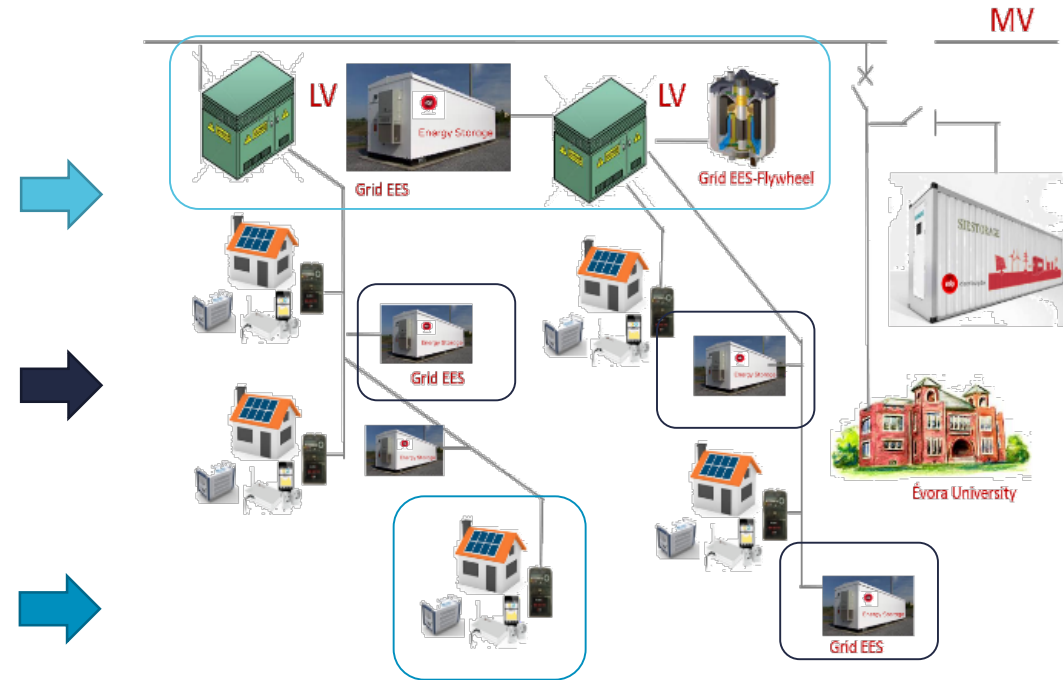

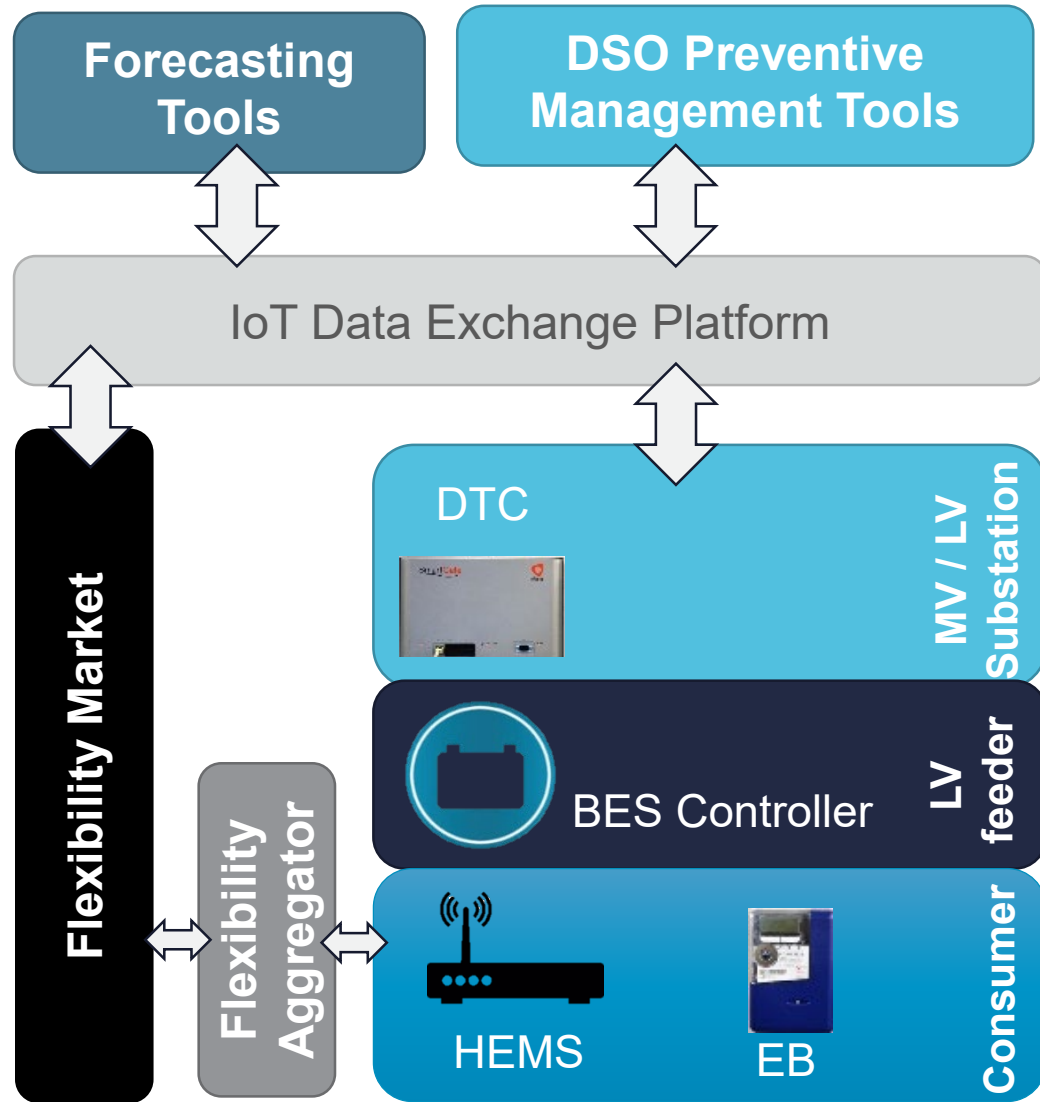

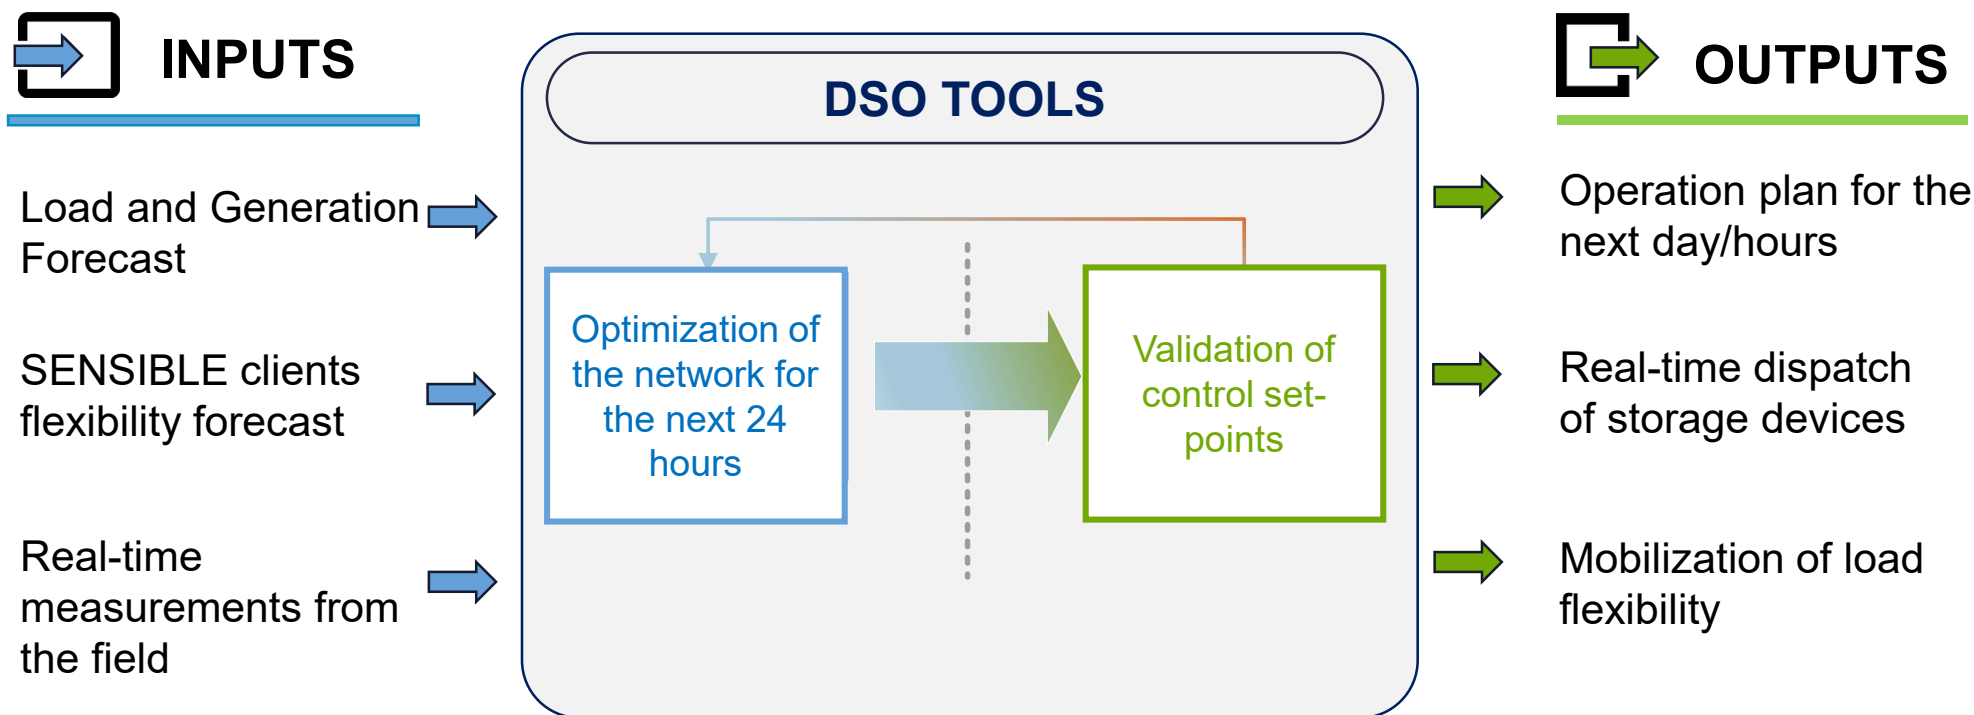

Smart and Flexible Distribution Network: Grid Support Services

Smart and Flexible Distribution Network

Smart and Flexible Distribution Network: Advanced network applications

DSO Tools are able to manage the system both in interconnected and islanded modes

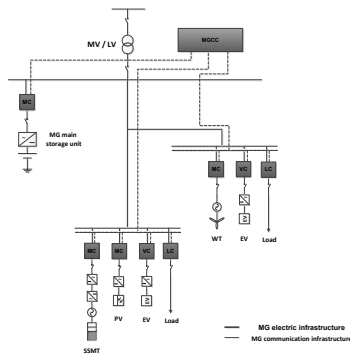

Smart and Flexible Distribution Network: Self-healing

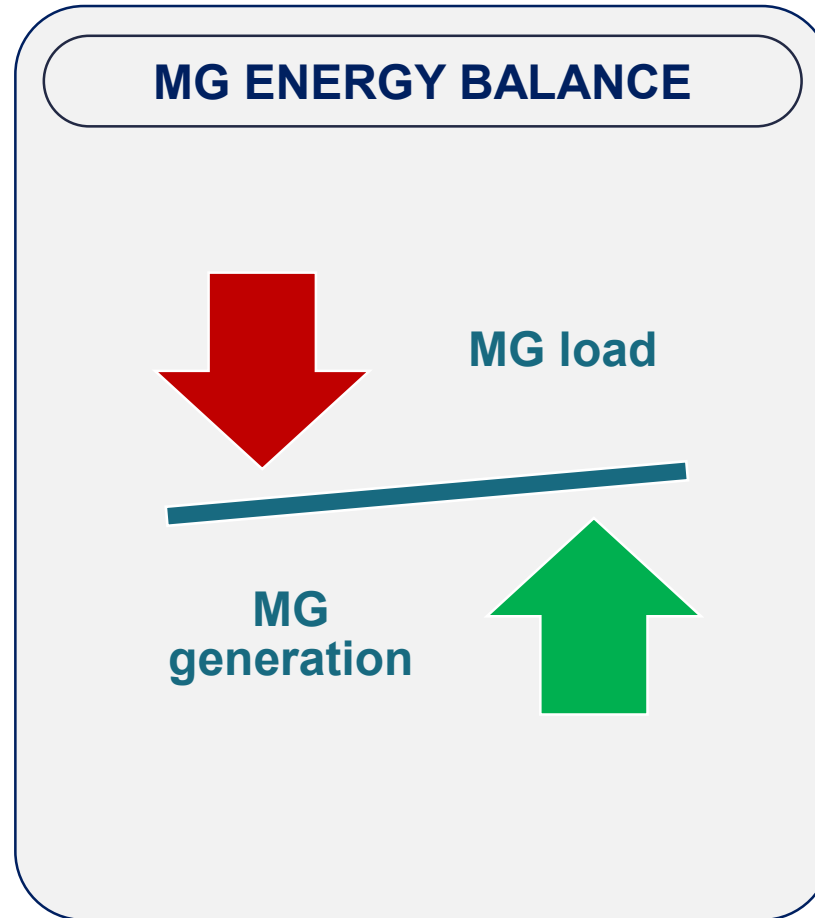

Load,
Generation
and Flexibility

Smart Grid Technologies: Future challenges

Smart Grid Technologies: Digital Technologies

- 
Advanced Analytics
 Predictive management and corrective control
- 
Blockchain
 Decentralized energy transactions
- 
Data Visualization
 Asset optimization, improved situational awareness
- 
Cyber Security
 Ensuring security of assets and systems, data privacy

- 
IoT
 Interoperable sensors and edge computing
- 
Drones and UAVs
 Network mapping and inspection
- 
Augmented and virtual reality
 Maintenance and crew support
- 
Distributed Computing
 Online optimization and security assessment applications

Smart Grid: Future vision

RE-THINKING NETWORK CONTROL CENTRES

- Predictive network operation
- Efficient data visualization tools
- Effective decision support tools
- Cooperative with external platforms

IMPROVING SITUATIONAL AWARENESS

- Improved asset monitoring and network monitoring
- Real-time data processing and analytics
- Systems interoperability and efficient data exchange

ADAPTIVE DISTRIBUTION NETWORK PROTECTION

- Adaptive to current and future network conditions
- Enabling islanding
- Compatible with inverter dominated systems

DISTRIBUTED AUTOMATION

- Decentralized fault location
- Decentralized self-healing strategies
- Preventive reconfiguration
- Dynamic islanding

SMART POWER CONVERTERS

- Fault Ride Through Capabilities
- Grid support services and other functionalities
- Highly efficient devices
